PROFILE

Australian Permanent Resident and Member of ACS. Experienced software tester with a strong background in testing. Various domains such as: Mining, Retail, Hospitality (Hotel App), Sales and Distribution software. Well-versed with all stages of Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC).

HIGHLIGHT OF SKILLS AND ACCOMPLISHMENTS

Manual and Automated testing

- Well-versed with Android application, API, windows-based Software due to working at **MineTec.**
- Experienced in Testing Client/Server and Web based Applications through working at **"IT Ideal Solution**" Company.
- Experienced in preparing Test cases and Test Data due to working at" **Varanegar Pisho"**.
- Good understanding of Various Testing Types: Regression testing, Integration testing...
- Ability to test all facets of software application functions and operation Testing Types (Functional, Nonfunctional).
- Involvement in Setting up Test Environment, Test Execution, Defect Reporting and Test Status Reporting.

Tools and Databases

- Good Knowledge on Test Management Tools like JIRA along with Agile methodology.
- Experienced in qTest and TestRail management Tool
- Experienced in Automation testing tools such as RANOREX, SoapUI and Postman
- Experience in executing SQL queries in order to view successful transactions of data and for validating data
- Selenium Web Driver
- Zephyre
- Azure Microsoft (Logic Apps, API Management, Cosmos DB)
- Postman

Computer Science:

- Selenium(intermediate)
- RANOREX (Intermediate)
- SoapUI (testing APIs)
- HTML5, CSS (intermediate)
- Django, Python (beginner)
- MySQL(advanced)
- Manual Testing (Advanced)
- JIRA/Agile (advanced)
- qTest (advanced)

CAREER PROGRESSION

Planit Software testing   (March 2019-Now)

Senior Test Analyst (Test Engineer L1 according to Company employee model)

Currently at **IMDEX** on behalf of Planit.

Responsibilities in GDR (Global Digital Rental) DevOps Team:

- Validating acceptance criteria (User Story and requirement).
- Writing test cases, Preparing Test Plan for New Features.
- Release testing (Including Front End, Back End on Dev environment)
- Writing API test Script for each module in Postman/JavaScript.
- Writing End to End test script for API testing
- Develop and maintain test scripts on Bitbucket.
- Integration testing on Staging (including all box fixes and recently developed features)
- UAT set up and running UAT sessions with stockholders.
- Preparing UAT result and user feedbacks on presented feature, creating ticket for received feedback, updating UAT document on Confluence.
- Preparing test summary at the end of the sprint for managers and Dev review
- Preparing UAT sign-off for product managers.

Tools and Technologies:

- Microsoft Azure (Logic apps, Cosmos DB, API management)
- Postman API
- Bitbucket
- SourceTree (To deploy test scripts)
- JIRA/Confluence

Achievements:

- **Working with new tool; Postman API.**
- **Creating an end to end API test which covers almost all the features. I can highlight this as a good change that I made in my current team.**
- **Getting more involved in coding, specifically JavaScript. Working in GDR team gave me this chance to know the {WebGirls} team and became part of "sheCodes" program.**

Integrate Sys-Indji system   https://www.indji.com/   (Sep 2018-March 2019)
Senior Test Analyst
Responsibilities:

- Testing web application
- Interacting with data base regarding validating data and writing SQL queries.
- Creating Automation Regression test with help of Selenium Web driver/Java
- Release Testing and Planning Test for each release
- Test Execution and preparing Test summary in each release
- Liaise with Developers and Managers to get the best test coverage and test result
- Daily meeting including Dev and Test Sprint Planning/Sprint reviews …

Tools
- Selenium
- Zephyr
- Developer Tools for generating mock data in specific tests like: Lightning Simulators, Event generators, Indji Service Manager for each data loaders, …
-

Achievements:
- **Company needed an automated script to run the application for different regions and different Farms, preparing that script with selenium web-driver was a big achievement.**
- **We were looking to reduce the manual testing while system under test was getting bigger and bigger. Automating the main test cases was a noticeable improvement that I could make.**

MineTec   Website: http://minetec.com.au   (July 2017-Sep 2018)
Responsibilities:

- Testing Android (Smarts Operator, SafeDetect) and Windows application (Smarts Manager).
- Creating Automated projects to test APIs in SoapUI.
- Prepare the test cases and test data for each release.
- Writing SQL queries for testing data accuracy.
- Design the test plan for each release in qTest (Test management tool).
- Deployment of applications, debian packages in test environment.
- Test execution, bug report, link the reported defects to the Failed test cases.
- Logging Defects on Jira and tracking issues with Developers
- Liaise with BA(mine engineers) to gather requirements and user stories.
- Summarizing the Test report for Test lead

Tools:
- Jira / outlook
- qTest/ SoapUI/ SQL/MobaXtrem

Achievements:
- beforehand there was no official test environment. So documenting Test cases in qTest for each module and maintaining test cases as application was growing was a
- As a result of Integration with Caterpillar Application (MineStar), MineTec decided to add APIs. Preparing API test script in SoapUI was the most highlighted achievement for me. Specifically.
- Improving the quality of application and culture of testing is the highlighted impact I could have in my team.

Similar Test Experience in Iran

VARANEGAR PISHRO-Tehran/Iran   (Dec 2014 - May 2016)
Software Tester - POS and Rastak projects

"Varanegar Pishro" is a leading software development company active in Sales and distribution software (design, develop and support). Varanegar is pioneer in developing point of sales software such as POS, Rastak for retailers and distributing applications for vendors on Tablet, based on C# and SQL.
